

UX Designer

As part of the engineering department you will help shape the design, usability and delivery of a product that's an essential tool for companies worldwide. You will be responsible for ensuring our product looks fantastic, delivers an intuitive, fluent and consistent user experience.

What You'll Do

- Become a valued member of an autonomous, cross functional team
- Design, storyboard and prototype amazing user experiences
- Lead design for product feature initiatives across our SAAS solution, proposing beautiful, realistic designs that meet user needs, customer feedback, and feature requirements
- Define user flows, feature set, and journey maps in collaboration with Product Management
- Quickly iterate on design solutions like wireframes, interaction flows, prototypes, screen specs, personas, etc.
- Write the necessary user stories for development
- Create prototypes of new products and features as means to explore and convey design solutions with internal teams and external users
- Find ways to develop your skills and the skills of those around you
- Have fun sharing knowledge, and learning from others

How You'll Do It

You will report to Head of Engineering, but day-to-day your work will be within your team, where you will have the agency and autonomy to approach challenges and solutions as you see best. Teams are largely autonomous, operate within standard Scrum guidelines and have ownership of the components they create.

Essential requirements

- **Background in B2B or SAAS:** Proven track-record designing/implementing UX efforts for B2B SaaS applications
- **Prototyping:** Experience with prototyping as a means to explore and convey design solutions
- **User-Centered Design philosophy:** You are proficient in defining user requirements and use cases that drive your design decisions
- **Feature definition:** Experience closely partnering with Product Managers to develop the strategy and rationale for features
- **Proactive:** Desire and ability to work hard, learn new skills quickly, and operate independently with minimal oversight
- **Communication and people skills:** Superior written and verbal communication skills; excellent people and social skills
- **Team player:** Positive attitude; excited by the challenge of working in a fast-growing company to build an exceptional business

Ideal requirements

- **Front-End skills:** HTML, CSS, including frameworks and tools for extending your prototypes into building templates for our front-end engineers to consume.
- **User testing and research:** Define and assist with user research needs
- **Interaction Design:** Experience choreographing interactions users have with software and service providers
- **Extended Front-end skills:** Experience with JavaScript and React would be a bonus, but not a requirement.

Your Work

Show us some of your favorite projects so we understand what you like to work on and learn more about your style, ideally:

- Demonstrates a passion for user experience, design and systematic thinking.
- Exhibits stylistic breadth, attention to detail, and balances beauty, innovation and usability.
- Shows experience in not only designing the user experience of a product but also the ability to clearly articulate and defend design decisions.
- Showcases the impact of their design throughout the development process from planning to execution.
